

Overview

Listed futures contracts that replicate the economics of collateralized OTC interest rate swaps

- Capital efficient product framework, providing a transparent, anonymous alternative to OTC swap trading
- Daily cash-settled variation margin, offsetting all the cash flows of an OTC swap: NPV changes, coupon payments and interest on collateral
- Non deliverable, optional quarterly roll - remains a CME cleared futures contract for the life of the underlying swap
- Eris on ICE (Intercontinental Exchange): EUR & GBP swap futures, Markit IG & HY CDS Index Futures
